

# NUIX AUTOMATION

Reduce the burden and rework of manual processing by automating your workflows

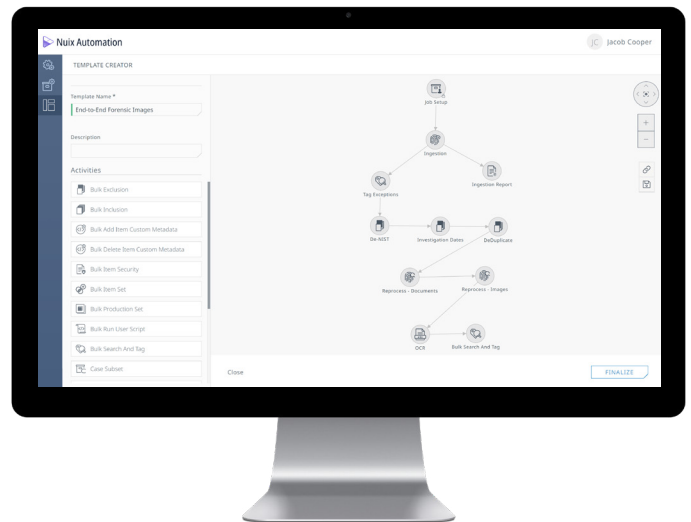

**Discovery, investigation and information governance tasks often involve complex workflows that you must complete consistently and repeatably.** Traditional approaches – such as detailed process manuals, custom scripts, third-party applications or just staring at the progress bar – all have hidden costs in time, money, inconsistency and potential for errors.

Nuix Automation is a web-based multi-user graphical tool that allows you to map out complex data processes across multiple activities and machines, and let them run with minimal user input. Double your Nuix usage and optimize your team’s time and budget by automating workflows 24 hours a day, 7 days a week.

## THE NUIX ADVANTAGE

- **Reduce the backlog.** Allocate tasks across multiple servers and leave them to run after business hours, eliminating the need for human intervention between processing steps and speeding up time to results and decision-making.
- **Minimize errors and rework.** Create detailed templates and workflows with consistent settings applied to each activity, greatly reducing the opportunity for human error and the need for costly rework.
- **Reduce total cost of ownership.** Even non-technical staff can complete difficult tasks and achieve consistent, repeatable, audited and defensible results so all your employees can focus on more interesting, high-value work.

*Ensure each activity is performed with consistent settings and in the right order.*

## DO MORE WITH LESS

### CREATE WORKFLOW TEMPLATES

More experienced users can create workflow templates that others can re-use with consistent results, all from a web-accessible graphical interface. Workflows can include activities such as processing, search and tag, optical character recognition, legal export, reprocessing and custom scripts.

### ROLE-BASED PERMISSIONS

Assign users or groups of users who can ingest data; stop, start, and reprioritize jobs; and create workflow templates.

### USE RESOURCES EFFICIENTLY

Allocate workflows to multiple machines, making the most of your environment as hardware and licensing permits.

### APPLY SETTINGS CONSISTENTLY

Ensure each activity is performed with consistent settings – using Nuix’s portable profiles – and in the right order, minimizing errors and process breakdowns.

### ADJUST PRIORITIES ON THE FLY

Even while jobs are running, managers and admins can pause and restart workflows and reallocate servers, to meet deadlines or changing priorities, without losing work.

### MONITOR PROGRESS FROM ANYWHERE

Monitor the status of your workflow and the configuration of each task, wherever you are, from any web browser.

### REPORT ON CRITICAL METRICS

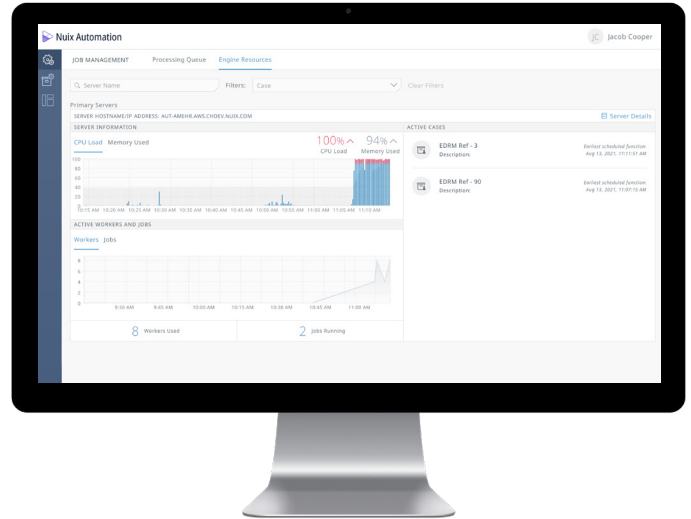

As part of any workflow, generate ingestion reports that summarize the content, speed, performance, accuracy, progress and other details for managers, clients or courts.

### AVOID MOVING DATA

Install our software behind the firewall, in the field or on cloud infrastructure. Work from a single Nuix case file to complete your processes without moving data or converting formats from one tool to another.

## POWERED BY THE NUIX ENGINE

Nuix’s patented parallel processing engine can search virtually unlimited volumes of unstructured data with unmatched speed and precision. It has a unique combination of load balancing, fault tolerance and intelligent processing technologies, and a deep built-in understanding of complex file and storage types that other tools can’t match.

*Queue tasks across multiple servers to improve performance and speed up entire workflows.*

Increase resource utilization  
and speed up your business.
